Founder & VP Chief Evangelist

Intelligent Machines must be able to explain every decision they make

Industrial IoT Challenges

The Challenges of Industrial IoT

TIME TO BUSINESS

When you need 9 months to create a Predictive Model with your Data Science team, and fail, this is a catastrophe...
When you need 9 hours to fail, this is good news !

DEPLOYMENT

Gartner says today more than 80% of Predictive Models that are created never go live...
You've got just an algorithm!

SHOP FLOOR ADOPTION

Once an asset makes a prediction, how to engage the business experts with actionable recommendations?
Otherwise, this is just useless!

PROCESS
MANAGEMENT

PRESCRIPTIVE
MAINTENANCE

EMBEDDED
INTELLIGENCE

Examples of customers

AERONAUTICS

- Commercial Aircraft
Predict “non conformity”
on aircraft Assembly Lines

MANUFACTURING

- Problem Classification
for mid power
equipment

AUTOMOTIVE

- Embedded Prescriptive
Maintenance for
intelligent vehicles

ARRIVAL

Xee.

Industrial Internet AERONAUTICS

- **Commercial Aircraft**
Predict “non conformity”
on **aircraft Assembly Lines**

Examples of customers

Supply Chain

Business case

- Assembly line from pieces to a ready to fly aircraft
- Process divided into many work orders
- Data collection by customer
- Data cleaning & management

Goals

- Prediction of non conformity for work orders later in the process
- Explanation of predicted failure to fix the problem & remove part asap

Result

- **Predictive Objects was fed by clean data**
- **Modeling with P.O Platform & a Cloud**
- **Very high prediction precision**
- **High ROI**

Industrial Internet MANUFACTURING

- Problem classification for **mid power equipment**

Examples of customers

Problem Classification

Business case

- Large industrial equipment (mid power) with black box
- Failure = real problem for final customer
- When this happens, manufacturer calls 1 expert (2 in the world...) to come onsite to retrieve data captured before failure
- Takes from 1 week to 1 month to the expert to explain the failure (>50 possible causes)

Goals

- Explain failure in a shorter time (blind test)
- Create a report to accelerate the expert's analysis

Result

- **Predictive Objects found the reasons for the failures in 1s**
- **Very high accuracy**

Industrial Internet AUTOMOTIVE

- **Embedded Prescriptive Maintenance for intelligent vehicles**

Examples of customers Prescriptive Maintenance

Business case

- Xee manufactures a device plugged to the CAN and ODB buses
- Live Capture of all electric signals from the car
- Use of exogenous data (weather, driver's behaviors...)

Objective

- Predict a battery failure live (while driving)
- Organize maintenance operations directly with the garage
- Then expand the business case to other possible failures

Result

- Live prediction of battery failure (results may be improved by using a larger dataset, more cars and more information)
- Automatic alert to be transmitted to the garage, then SMS sent to the driver: « Your battery is gonna fail in 8 days, please come and visit us on Tuesday so that we change it »...
